Introduction

Kovair team is proud to announce the release of version 10.6 for all its products. The document throws a major light on some of the latest enhancements and new features that have been added to all the different products of Kovair in this version of release.

Platform and Browser Support

This release supports the deployment of Kovair on Windows Server 2008 R2 and above.

Release 10.6 can be best viewed in latest versions of Google Chrome, Internet Explorer Edge and Firefox.

Kovair Omnibus

Kovair Adapter for JILE

Kovair [Adapter for JILE](#) provides full scope of collaboration between multiple teams. When each team has the comfort of using the tools of their choice, greater efficiency and productivity can be achieved. Kovair JILE adapter supports bidirectional flow of data between JILE and other connected tools.

Kovair Adapter for Veracode

Kovair [Adapter for Veracode](#) allows you to maximize the benefits of static and dynamic security testing for your application by collaborating the Security Test Result.

Kovair Adapter for Teamcenter

Kovair [Adapter for Teamcenter](#) helps in solving several integration scenarios between Teamcenter and other enterprise applications where Bill of Material (BOM) transformation and management happens across the enterprise.

New Features in Kovair ALM Studio

Automatic validate user in ALM against AD through LDAP

ALM Users imported from LDAP are periodically checked for their Activation at AD. As a result, the ALM users are deactivated manually or automatically based on the Configuration as soon as they are deactivated from AD.

Auto initiation of Task Status based on user timesheet feed

Through this implementation, the task status is auto changed to "In Progress" or "Not Started" based on time entry. There are two primary conditions –

1. For a new task which has the status "Not Started", the status is automatically changed to "In Progress" after a successful time entry.

The screenshot shows the 'View Task' page for task ID 54846. The status is 'Not Started'. The title is '5001:Kovair ALM::Task to logged in user'. The source item type is 'Workspace' and the source item is 'Work Space - Kovair ALM'. The activity is 'Approval Rejection' and the owner is 'Afreen Kit Gani - Individual'. The 'Actual Duration' is 0.00. The 'Planned Start Date' and 'Planned Finish Date' are empty. The 'Time Entries' section shows a total time of 0, with no earliest or latest entry dates. A table below the summary shows no timesheet entries available.

User	Total Time	Earliest Date	Latest Date
No Timesheet Entry Available			

Task is "Not Started"

The screenshot shows the same task ID 54846, but the status is now 'In Progress'. The 'Actual Duration' is 2.00. The 'Time Entries' section shows a total time of 2.00, with the earliest and latest entry dates both set to 12/24/2020. The table below the summary now shows one entry for user 'Afreen Kit Gani' with a total time of 2.00 and dates of 12/24/2020.

User	Total Time	Earliest Date	Latest Date
Afreen Kit Gani	2.00	12/24/2020	12/24/2020

Task auto updated to "In Progress" after Time Entry

2. When all time entries for a particular task is deleted, the status for the task changes from "In Progress" to "Not Started".

Switching On/Off Capacity & Demand Feature from Site Setting

With the latest Kovair 10.6 release, users have the option to check or uncheck the "Use Capacity and Demand Management" feature at the Site level. Based on the selection at the Site level, the "Use Capacity and Demand Management" feature remains checked or unchecked by default during project creation.

A screenshot of a settings panel with the following items:

- Use InLine Edit :
- Use Capacity and Demand Management :** (highlighted with a blue box)
- Can Create User :
- Show Notification Bell :
- Allow Banner :
- Send Mail on Logon Failure :

Provision for changing timesheet status to submitted by approver

From Release 10.6, Kovair introduces a new feature in My Timesheet. A new interface for timesheet approver has been introduced to reset the timesheet status. This would eliminate the risk of approving or rejecting a timesheet by mistake.

A screenshot of the 'Approve Timesheet' interface. At the top, there are two tabs: 'Approve By Task' and 'Approve By Week'. To the right, there are four buttons: 'Approve Selected' (green), 'Reject Selected' (red), 'Approve All' (green), and 'Reject All' (red). Below these is a table with the following columns: 'Timesheet Period', 'Task Title', 'Total Hours', 'Comments', and 'Approver Comments'. A blue box highlights a document icon in the top right corner.

Inclusion of Single Parameter Dashboard in Project Portfolio Management level

In ALM, for PPM level dashboard users can do additional filtering on qualified record(s) which are included in dashboard for supporting cross entity. This additional filtering applies to the gadgets based on report for Site level Entity and Predefined Report at PPM level.

Provision for Timesheet approver to make comments on submitted timesheet

With this release, a new placeholder called User Comments has been added, which would show the comments entered by the Timesheet user against the corresponding submitted time entry. In addition, under the Approve by Week tab, a new placeholder called Approver Comments has been added where approvers should be able to add a comment during approval or rejection.

User Name	Submit Date	Time Taken	Comments	Approver
sayak mgjunder				
34:test attachment 1 attachment:Default: test workspace 2	8/28/2020	5.00		
5041:test workspace 2:Default: test time entries: test workspace 2	8/24/2020	3.00		
34:test attachment 1 attachment:Default: test workspace 2	8/28/2020	6.00		
5041:test workspace 2:Default: test time entries 12: test workspace 2	8/28/2020	3.00		
5041:test workspace 2:Default: test time entries 11: test workspace 2	8/28/2020	3.00		
5041:test workspace 2:Default: test time entries 13: test workspace 2	8/31/2020	2.00		
	8/31/2020	3.00		

Approve By Task		Approve By Week		Approve All	
Timesheet Period	Task Title			Total Hours	
Jul 26, 2020 - Aug 1, 2020

Approve	Reject	Generic - Event Participation:SYSTEM			0.75
Approve	Reject	Generic - System Health Check:SYSTEM			0.25
Approve	Reject	Generic - Application Health Check:SYSTEM			0.75

Enabling of Multi-Edit in Project Portfolio Management Level Entities

Kovair 10.6 introduces the header icon “Multi-Edit” in PPM entity list page. Upon clicking the icon, a new tab is displayed where users can perform multiple operations on multiple entity items simultaneously. User can also double click over each cell for inline editing. Inline editing of values is only for fields which are editable.

Enabling of Document type Entity in Project Portfolio Management

With this enhancement, users will be able to create Document type entity and explore all its functionality at the PPM level.

Excel import - Import data through copy from clipboard

Using this enhancement, records from unstructured excel data is copied in clipboard. The copied excel data can be edited, parsed against proper parsing format, date and date-time format before being imported.

Provision for External Archival

This enhancement is primarily targeted towards industries where huge data in terms of change history and logs need to be archived externally. During audits, auditors might want to see data which are several years old. In such situations, it gets difficult to maintain the data in change history within the same database, as it will degrade the performance. To cater to such problems, the data needs to be archived in file system, and user should be able to access it as and when required.

Expose Password field at Policy as the Email action

This implementation introduces a Source Email Field in the User Policy Level. Whenever a new ALM user is assigned to a new workspace, a mail gets triggered to the default email id of the user with his username and password.

Introduction of Project Health Report by Milestone

This will be a portfolio level report. This report will populate data only if users define Milestones in their project plan and the plan has been baselined. This report will compare the latest status of the milestones defined in the plan with status of those milestones in the last defined baseline.
