

# HP ALM 11.0 <=> IBM DNG 5.0

## Sync and Migration Solution Datasheet

### FEATURES & BENEFITS

- ❖ Single point console for both synchronization and migration of data between tools
- ❖ Simple & intuitive UI for easy configuration
- ❖ On-screen monitoring of syncing health, including successful and failed sync counts
- ❖ Graphical view of Sync progress metrics for any period of time
- ❖ Migration of bulk data along with comments attachments, links & relationships of records
- ❖ Side-by-side comparison of post-migration data
- ❖ Data sanity check option for synced or migrated item history and live sync status
- ❖ Support of Syncback action for auto-updating other tools upon change in artifacts
- ❖ Additional support for manual data sync
- ❖ Support for nested parent-child folder structure
- ❖ Easily configurable business flow b/n tools
- ❖ Minimum tool maintenance and infrastructure cost
- ❖ No training and user adaptation cost

### Application Prerequisites

- ❖ Microsoft .NET Framework 4.5 Runtime
- ❖ HP ALM 11.0 Client (OTA Client)
- ❖ IBM DNG 5.0 Client
- ❖ Both HP ALM 11.0 and IBM DNG 5.0 must be accessible from the machine where QuickSync will be installed.
- ❖ Minimum Screen Resolution: 1366 x 768
- ❖ Minimum Random Memory: 4 GB RAM.
- ❖ Minimum HDD Size (Native) : 150 MB

### OVERVIEW

HP ALM is a popular application lifecycle management tool, providing support for all the core product lifecycle activities including Requirements, Test planning and Defect management. IBM Rational DOORS Next Gen is also a widely used Requirements Management tool.

Organizational users often need to migrate data from HP ALM to IBM DNG or vice-versa, as well as maintain the migrated data in both the tools for various business reasons. The migration process, if done manually, may lead to data inconsistency and data loss due to human error. Monitoring sync status, maintaining data history and keeping the individual artifacts in sync in both the tools are other major challenges.

Kovair QuickSync is designed to provide users a point-to-point synchronization and migration solution for connecting any two best-of-breed tools. It helps users seamlessly migrate HP ALM objects to IBM DNG and vice versa, as well as keep the data in sync in both the tools.

### Sync and Migration Support Details

HP ALM 11.0 <=> IBM DNG 5.0	Sync Support	Migration Support	Migration Direction
	Yes	Yes	HP ALM to IBM DNG IBM DNG to HP ALM

Tool Name	Artifacts being Synced or Migrated
HP ALM 11.0	Requirements
IBM DNG 5.0.0	Business Requirements, System Requirements
